

# Dog Enzymes & Probiotics

Animals that must hunt for food will look for foods that meet their nutritional needs and included in those nutritional needs are enzymes.

## Enzymatic Dog Supplements Can Help Control Dog Gas

Since dog enzymes play such an important role in a healthy digestive system, an enzyme supplement designed specifically for your dog and his proper digestion, can make a world of difference in your best friend's digestive problems and overall health.

Eating like it's their last meal often causes dog gas and flatulence problems. By adding back the missing digestive enzymes in a his diet, you can possibly avoid future problems with his health such as organ distress which is believed to play a role in promoting degenerative diseases such as Hip-Dysplasia, OCD and others.

Dogs enzymes are produced in the pancreas and salivary glands and their job is to help break down certain food components such as protein, carbohydrates and fat. Unfortunately as a dog ages, the production of these digestive enzymes often slows down as well.

## Enzymes And Remedies For Dogs With Digestive Issues

Raw foods and meats already contain a hearty supply of enzymes which assist in the process of digestion. Although when food is cooked, enzymes are destroyed and this causes your dog's body to start producing its own enzymes to break down the food. If your dog is older or his immune system is weak, his enzyme producing ability is impaired.

A daily enzyme supplement is strongly recommended. Live enzymes for dogs are extremely beneficial in promoting good health no matter what the dog's age. However, these proteins are especially helpful for older and fragile dogs.

Our customers are always amazed at the changes they see within their dog in a matter of weeks. We have seen the results in most dogs, both young and old. They not only gain some spring back in their step and feel good, but their eyes are bright and their tails wag again.

Also, if your dog eats processed food and chances are he does eat some sort of dry kibble, then without a doubt his body needs and will benefit from [Dog Enzymes And Probiotics](#). Certainly a pet that has been or is on medications will need probiotics as the medications destroy the good bacteria in the colon and intestines.
